SQL COURSE PURCHASE ANALYSIS – SUMMARY REPORT

1. Project Overview

The project focuses on analysing learner course purchases using SQL. The analysis was performed using three tables: Learners, Courses, and Purchases. SQL joins, aggregate functions, grouping, filtering and sorting were used to explore purchasing patterns and course performance.

2. Key Insights from Data Analysis

- **Learner Spending:** Calculated each learner's total spending based on purchase quantity and course price, along with their country.
- **Top 3 Popular Courses:** Power BI Fundamentals, SQL for Beginners, and Advanced SQL recorded the highest purchase quantities.
- **Category-wise Revenue:** Database generated 23,000.00 in revenue, followed by Data Analytics with 19,000.00 and Programming with 17,800.00.
- **Learner Engagement:** Identified the number of unique learners purchasing courses from each category. Database had the highest participation, with 6 unique learners.
- **Unpurchased Courses:** Identified four courses without any purchases: Advanced Power BI, Excel Essentials, Cloud Computing, and Cyber Security.
- **Purchase Details:** Combined learner, course, and purchase information using INNER JOIN, LEFT JOIN, and RIGHT JOIN to explore individual purchase details.

3. Recommendations

- Focus marketing campaigns on popular courses such as Power BI Fundamentals and SQL for Beginners.
- Introduce promotional offers for courses that have not received any purchases.
- Develop strategies to increase learner engagement across different course categories.
- Recommend related courses to learners based on their previous purchasing activities.
- Monitor category-wise revenue and purchase quantities to identify opportunities for business growth.

4. Conclusion

The SQL analysis provided insights into learner spending patterns, popular courses, category-wise revenue, and purchasing behaviour. It also helped identify courses without purchases, providing opportunities to improve marketing strategies, increase course sales, and support data-driven decision-making.
